

BROOKDALE
— SENIOR LIVING SOLUTIONS —

Brookdale Buckingham

An Alzheimers and Memory Care Community
1824 Manchester Rd, Glastonbury CT, 06033
(860) 647-1695

How we got started?

Brookdale Buckingham has positioned itself as the leading Memory Care Community in CT. Our Community is over 16 years young and we have been recognized for the excellent quality of care and programming for those diagnosed with a memory impairment or Alzheimers.

What makes us special?

The tenured associates at Brookdale Buckingham is what differentiates this senior living community from any other. We understand our role as part of your loved one's "care team". While the aesthetics and architectural design of a community are important when finding a new home for your loved one, those attributes don't provide direct care to your loved one. Due to the amount of interactions our associates have with each resident, every associate is provided with specialized training in dementia care and cognitive impairment. Our associates are genuine in their compassion and are empathetic to the needs of our residents. We all strive to meet the individual needs of each resident and to promote cognitive, sensory, creative and physical enhancement.

The strong relationships we have developed with local hospitals, physicians, home care agencies, churches, and volunteers ensure that our residents are provided with a holistic approach to their continuum of care.

What is our favorite part of our community? And what inspires us to get better?

Our Residents

We join their journey, they don't join ours; your family becomes ours. When you walk into the community and see the residents and the associates interacting, you know in your heart **"It feels like home and the right place for your loved one"**. We live by the simple philosophy, **"We work where our residents live, they don't live where we work"**

Specialized Education/Training

Monthly in-service training is provided on an ongoing basis relating to topics specific to caring for individuals with memory impairment. We are a dedicated memory care community; the associate is accustomed to the challenging behavioral expressions that are associated with this diagnosis. Each associate knows how to respond with compassion, understanding, and the sensitivity required to redirect rather than react in a manner which can increase anxiety.
